Research Paper - 19
December 2003

James M. Ferris: Professor and Director, The Center on Philanthropy and Public Policy; School of Policy, Planning, and Development, University of Southern California, Lewis Hall 210; Los Angeles, CA 90089-0626

ABOUT THE CENTER ON PHILANTHROPY AND PUBLIC POLICY

The Center on Philanthropy and Public Policy promotes more effective philanthropy and strengthens the nonprofit sector through research that informs philanthropic decision making and public policy to advance public problem solving. Using California and the West as a laboratory, the Center conducts research on philanthropy, volunteerism, and the role of the nonprofit sector in America's communities.

In order to make the research a catalyst for understanding and action, the Center encourages communication among the philanthropic, nonprofit, and policy communities. This is accomplished through a series of convenings and conversations around research findings and policy issues to help key decision makers work together more effectively to solve public problems and to identify strategies for action.

The opinions presented in this paper represent those of the authors and not those of The Center on Philanthropy and Public Policy

ABOUT THE AUTHOR

James M. Ferris holds the Emery Evans Olson Chair in Nonprofit Entrepreneurship and Public Policy in the School of Policy, Planning, and Development at the University of Southern California. He directs The Center on Philanthropy and Public Policy. Professor Ferris specializes in the economics of the public and nonprofit sectors, public finance, and public policy. His research examines the shifting roles of the public, nonprofit and for-profit sectors in governance and the economy. He has done extensive work on public service delivery, focusing on the contracting decisions of local governments and strategies to improve public sector performance through competition, decentralization, and privatization. He is currently investigating the causes and consequences of the conversion of healthcare organizations from nonprofit to for-profit status and the implications for the nonprofit role in healthcare; the changing landscape of philanthropy; and intersectoral alliances for urban problem solving.

PREFACE

This report briefly updates the information from the baseline analysis of California foundations undertaken by The Center on Philanthropy and Public Policy in cooperation with The Foundation Center. This report provides an update for 2000 and 2001.

The baseline analysis was conducted with data through 1999, and focused on trends during the 1990s. The results of this analysis are reported in the Foundation Center's monograph: *California Foundations*, and various reports issued by the Center, best summarized in *California Foundations: Trends and Patterns*. Foundation fortunes have dimmed somewhat since then. Although contrary to public perception, the gains of the 1990s have not been reversed, as revealed in this update.

It is important not to over-interpret annual fluctuations. Given the high concentration of assets and giving among a relatively small number of foundations, we know that changing circumstances or a single decision about grantmaking can move the numbers in dramatic ways. Indeed, there are several examples in this analysis. Nevertheless, it is important to track annual changes so as to detect emerging trends. Changes that are sustained over multiple years may be a harbinger of the future. Thus, the Center intends to continue tracking changes among California foundations in the years ahead.

James M. Ferris

Director

The Center on Philanthropy and Public Policy

CALIFORNIA FOUNDATIONS: AN UPDATE

The Size and Growth of California Foundations¹

After a period of significant growth in the assets and giving of California foundations in the 1990s, the growth rate for assets and giving slowed dramatically at the turn of the decade. However, foundation assets and giving levels remain far greater than they were at the beginning of the 1990s.

- Between 1999 and 2000, growth of total foundation assets in California slowed to 2.7 percent, as compared to an average annual growth rate of 31.1 percent between 1991 and 1999. And, between 2000 and 2001, total foundation assets in California decreased by 5.7 percent.
- The rates of total foundation giving also fell quite dramatically at the end of the 1990s. While total foundation giving increased on average 28 percent per year from 1991 to 1999, the growth rate slowed to 18.5 percent from 1999 to 2000, and to 3.9 percent from 2000 to 2001.
- Even with recent declines in foundation assets and giving in California, total dollar amounts for both assets and giving are still far greater than they were in the early 1990s: total assets held by all California foundations were \$66 billion in 2001 as opposed to \$20 billion in 1991 and total giving was \$3 billion in 2001 as compared to \$900 million in 1991.

While growth in assets and giving for California foundations exceeded the growth rate of national foundations in the 1990s, California experienced a more dramatic slowdown in growth than national foundations in 2000 and 2001.

- Total assets for California foundations increased 2.7 percent from 1999 to 2000, while the national growth rate of total assets was 8.4 percent. As in California, foundations across the U.S. saw total assets decrease between 2000 and 2001. However, while the total assets of California foundations decreased by 5.7 percent in that time period, U.S. foundations only lost 1.9 percent of the value of their total assets.

¹ Source: The Foundation Center, Guide to U.S. Foundations, 2000-2003. Data sources include: questionnaires mailed out annually to more than 22,000 foundations, foundation websites and 990-PF data from the IRS. Since community foundations do not file 990-PF forms, data for these entities are gathered from surveys and foundation publications. Given the variation in reporting times across data sources, the fiscal picture of the total active U.S. foundations usually contains data spanning four years. Thus, the Foundation Center refers to each year as “circa” indicating that is the year from which most data is obtained; data for circa 1998 is provided in the 2000 Guide; data for circa 1999 is provided in the 2001 Guide, etc.

- Growth rates for total foundation giving in California and the U.S. were more closely aligned from 1999 to 2000, when the growth rate of total foundation giving in both California and the U.S. was around 18 percent. However, while California saw the growth of total foundation giving slow to 3.9 percent from 2000 to 2001, the growth rate of foundation giving in the U.S. overall only slowed to 10.7 percent.

As a result of declining foundation assets and giving in California at the end of the 1990s, California's share of total U.S. foundation assets and giving decreased during this time period.

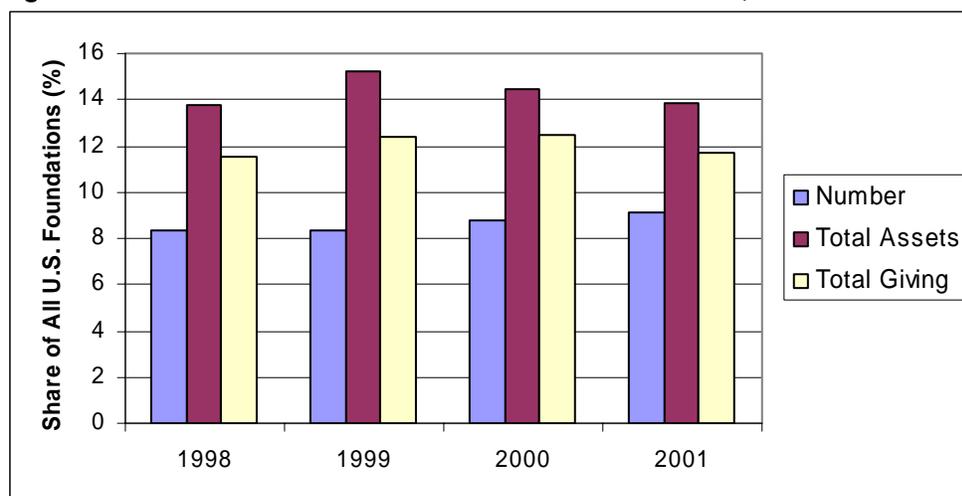

- In 1999, California foundations held 15.2 percent of total assets of foundations nationally. In 2000, California's portion of total U.S. foundation assets had decreased to 14.4 percent. From 2000 to 2001, as the total assets of California's foundations declined at a faster rate than those of the U.S., California's portion of total U.S. foundation assets decreased further to 13.8 percent.
- Total giving by California foundations accounted for 12.4 percent of total giving among foundations in the United States in 1999. This remained relatively constant in 2000, with California representing 12.5 percent of total U.S. giving. A slight decline was seen in 2001, with California at 11.7 percent of total giving among U.S. foundations.
- California's share of the total number of foundations in the country has remained relatively constant – at 8.4 percent in 1999, 8.7 percent in 2000 and 9.1 percent in 2001.

The Structure of California Foundations

Two critical dimensions of the structure of California foundations – the high concentration of assets and giving among a relatively small number of foundations and the relative importance of community foundations in terms of giving and gifts received – are little affected by the slowdown in the growth of foundation assets and giving in 2000 and 2001.

California foundations are even more concentrated in size than foundations nationally. A small number of California foundations hold the majority of assets and account for a substantial portion of grantmaking in the state.

- California foundations with assets over \$250 million (35 of the state's 5,618 foundations in 2001) hold a greater portion of all of the state's foundation assets as compared to large foundations in the U.S. California foundations with assets over \$250 million held between 63 and 68 percent of all foundation assets in California from 1998 to 2001. During this same time period, U.S. foundations with assets over \$250 million held assets that ranged from 52 to 53 percent of total foundation assets nationally.
- A similar concentration is seen with foundation giving: California foundations with assets over \$250 million accounted for between 42 and 54 percent of total foundation giving in the state between 1998 and 2001. The largest U.S. foundations, on the other hand, accounted for between 37 and 40 percent of total giving among all U.S. foundations for the same time period.
- California foundations with over \$1 billion in assets (a total of 8 or 9 foundations in each of the four years) held between 45 and 52 percent of all foundation assets in California from 1998 to 2001, compared to U.S. foundations of the same size, which held between 35 and 37 percent of total U.S. foundation assets during the same time period.
- California foundations with assets greater than \$1 billion account for a greater share of giving than U.S. foundations on the whole. Twenty-five to 34 percent of total giving in California came from foundations with greater than \$1 billion in assets from 1998 to 2001, while U.S. foundations of the same size accounted for 23 to 25 percent of total giving in the same time period.

Source: See Table 2.

Figure 3. Percent of total foundation giving of foundations with over \$250 million in assets

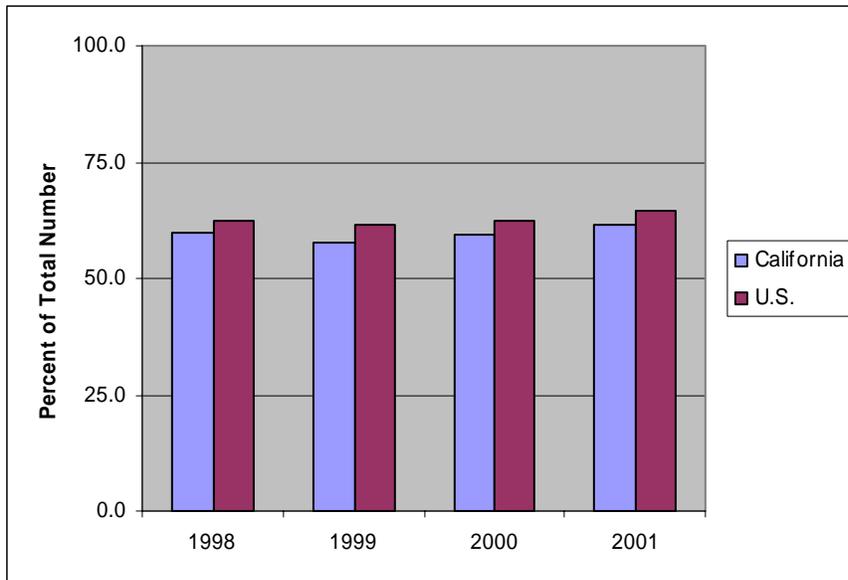

Source: See Table 2.

At the other end of the size spectrum, over half of California foundations have assets of \$1 million or less, and their numbers are increasing.

- In 2001, California foundations with assets of less than \$1 million accounted for 62 percent of all foundations in California. This represents a slight increase from 1998, when small foundations accounted for about 60 percent of all foundations in California. A slight decrease was seen in 1999, when foundations with assets of \$1 million or less represented 58 percent of the total number of California foundations, but the trend has been upward and mirrors the trend seen in the U.S. as a whole, which has had a slightly greater percentage of small foundations than California in the same time period, ranging from 61 to 65 percent of all foundations in the U.S.

Figure 4. Percent of total number of foundations with less than \$1 million in assets

Source: See Table 2.

In terms of the types of foundations, private independent foundations account for the great majority of the foundation sector, in terms of numbers, assets and giving, both in California and nationally. The most distinctive feature of California's foundation sector is the prominent role played by community foundations in terms of foundation giving and gifts received.

California's community foundations account for a higher share of the giving of all foundations within the state, than do community foundations nationally.

- California community foundations represented 11 percent of giving by all of the state's foundations in 1998, while community foundations nationally represented about 8 percent of all foundation giving. While giving among U.S. community foundations remained constant at about 8 percent through 2001, community foundations in California accounted for 13 percent of the total giving in 1999 and 12 percent in both 2000 and 2001.
- Community foundations within the state have accounted for a larger share of gifts received by all foundations than is the case nationally from 1998 through 2000. However, the community foundation share of gifts received by foundations within the state dipped significantly from the approximately 20 percent to 7 percent in 2001. Community foundations nationally also dipped but at a much smaller rate.
- Community foundations in California account for about 1 percent of the total number of foundations and about 6 percent of total assets between 1998 and 2001, comparable to the community foundation share nationally.

Data includes all dependent, corporate, community and operating foundations making grants of at least one dollar during the relevant fiscal reporting period. Sources of data for foundations include IRS information returns (Form 990-PF), foundation reports and information reported to The Foundation Center on annual surveys of foundations with assets of at least \$100,000 or giving of \$50,000 or more. Assets are stated at market value. Total giving amount includes grants, scholarships and employee matching gifts; it does not include all qualifying distributions, e.g. loans, PRIs, set-asides and program or other administrative expenses. For definition of foundation types see: *California Foundations: A Snapshot*, The Center on Philanthropy and Public Policy, 2001.

Grantmaking Trends and Patterns²

The major beneficiary of California's philanthropic growth is the people of the state of California. California's foundations focus the majority of their grantmaking on nonprofits within the state.

- Between 68 and 70 percent of grants from California foundations went to in-state grant recipients from 1998 to 2000; this increased to 74 percent in 2001.
- The net flow of grants in and out of California has changed over the period. There was a net flow of grants into California in 1998 and 1999 of \$28.3 million and \$20.2 million, respectively. This changed to a net outflow of \$36.6 million and \$33.6 million in 2000 and 2001, respectively.

Source: The Foundation Center, Grants Index Database, 2000-2003.

² The analysis in this section is based on The Foundation Center's grants database. The database is a sample of mostly large foundations (samples consist of between 1,007 and 1,015 foundations for each of the years in the 1998-2001 period) which represents approximately half of all U.S. foundation giving and California giving each year. The sample includes grants of \$10,000 but does not include grants from donor-designated funds of community foundations or grants to individuals.

Patterns of grantmaking by the state's foundations reveal their top funding priorities to be health, education, human services, the environment, and the arts. The actual dollars flowing to these programmatic areas has increased in most instances over the period 1998-2001, although the relative ranking has been somewhat altered.

Health has been the top funding priority over the period, driven by the significant philanthropic resources within the health care foundations that were created from the conversion of nonprofit health care organizations.

- Health grants have increased from almost \$250 million in 1998 to \$682 million in 2001, with the percent of all grantmaking ranging from 20 percent to 26 percent for the period.

Education grantmaking, while the top foundation priority nationally, typically is the second highest priority within the state.

- In 2001, education's share of grantmaking within the state topped that of health, at 28 percent, compared to between 15 and 18 percent in the preceding three years. This jump in 2001 is due to a \$400 million dollar grant made by the Hewlett Foundation to Stanford University.

Human services funding experienced a decline during 2001, after holding relatively stable during the previous three years.

- The total dollars going to human services increased from 1998 to 2000, when it was the third highest funding area. But, human services experienced a decline in actual dollars from 2000 to 2001, and fell to fourth in terms of relative funding priority.

The environment is an important and growing priority for California foundations.

- Grants for the environment grew from \$100 million in 1998 to over \$312 million in 2001. In terms of foundation giving within the state, environment's share rose from 9 percent in 1998 to a high of 14 percent in 2000, and 11 percent in 2001. This compares to a steady 6 percent of foundation giving nationally.

Funding for arts and culture continues to decline in terms of the share of total grantmaking.

- Funding for the arts declined from 15 percent in 1998 to 9 percent in 2001. Arts fell from fourth to fifth in funding priority, as it was overtaken by the environment.

California foundations continue to decrease their emphasis on science and technology funding.

- Science and technology grantmaking has continued to decrease both in California and nationally, though giving by California foundations to science and technology is still greater on a proportional level than that of national foundations, at 5 percent and 3 percent respectively.

Conclusion

The growth of the assets and giving of California foundations slowed in 2000 and 2001 after robust growth throughout the 1990s that peaked in 1999. This slowdown was not unique to California, but it was more extreme than the slowdown in growth among foundations nationally. In fact, foundation assets in California not only slowed in growth in 2001, but actually declined by 5.7 percent. Despite the recent turn of events, the assets and giving of California foundations still far surpass levels from just a few years previously.

Even with the changes that have occurred in 2000 and 2001, the most distinctive features of California's foundation sector still remain – the degree of size concentration and the prominent role of community foundations. Foundation assets and giving are more concentrated in California than they are nationally. In 2001, the top 10 foundations in terms of assets held 47.3 percent of the assets and accounted for 27.4 percent of the giving of all California foundations; and the top 50 foundations in terms of assets held 67.1 percent of the assets and accounted for 47.8 percent of the giving of all California foundations. And, community foundations account for 12 percent of the giving of all California foundations in 2001 compared to 7.9 nationally. The significant departure is in terms of gifts received, where the percent of gifts received by community foundations nationally exceeds the community foundation share in California (11.1 percent versus 7.3 percent), which reflects a reversal of recent patterns

Despite the changing fortunes of California foundations in 2000 and 2001, their grantmaking priorities have not been dramatically impacted. Health, education, and human services continue to garner the majority of funds, and the keen interest of California's foundations in environmental issues continues to grow.

This updated baseline analysis of California foundations reflects the slowdown in the growth of foundation philanthropy in 2000 and 2001 after an unprecedented period of growth that seems to have peaked in 1999. It is too early to assess whether the patterns from these last two years are simply a pause before further growth or the beginning of a period of more lackluster growth in foundation philanthropy in the Golden State.

Note: IN = Independent; CS = Corporate; CM = Community; OP = Operating

*Source: The Foundation Center. Based on the Guide to U.S. Foundations circa 2001, which includes all independent, corporate, community, and operating foundations making grants of at least one dollar during the relevant fiscal reporting period. Sources of data for these foundations include IRS information returns (Form 990-PF), foundation reports, and information reported to the Foundation Center on annual surveys of foundations with assets of at least \$100,000 or giving of \$50,000 or more. Assets are stated at market value. Total giving amount includes grants, scholarships, and employee matching gifts; it does not include all qualifying distributions, e.g., loans, PRIs, set-asides, and program or other administrative expenses.
